

MODERN ENERGY MANAGEMENT SERVICES

Introducing Modern Energy Management Services at Advantage Utilities – cutting edge tools that can help you lower your costs, reduce your usage and meet your green goals in a sustainable way.

WHAT ARE MODERN ENERGY MANAGEMENT SERVICES?

Advantage is proud to offer you a 360° investigation-to-installation energy management service that aims to help you regain control of your energy consumption, reduce your costs and, if feasible, install sustainable self-generation technologies.

We can also act as an energy advisory and project management service, taking on project work for you directly or as an outsourced energy management team.

WHAT'S INVOLVED?

We start with a feasibility study on your current position and put together a summary report of ways to enhance your business's energy management. From there we create bespoke, tailored solutions that can cover everything from compliance to optimisation to installing the latest energy capture and generation systems.

SECTORS WE HAVE EXPERIENCE IN INCLUDE:

- Hotel and hospitality
- Theme parks and leisure resorts
- Property management
- Retail
- Public sector organisations
- Major airports

No matter what business you're in, Advantage Utilities can tailor bespoke solutions to help you manage your energy, cut your costs and meet your green goals.

Call us today on 0207 371 5360 or speak to your account manager to find out more.

SERVICES AVAILABLE

Service	What's included
Auditing	We can undertake single and multi-site energy audits that reveal ways you could potentially improve your usage efficiency and save money.
Compliance	We can help you undertake compliance procedures relating to legislation and regulation your business may be obliged to follow. This includes the Energy Saving Opportunity Scheme (ESOS) and Streamlined Energy & Carbon Reporting (SECR) amongst others.
Optimisation	We look for ways to help you reduce your non-energy costs through modified usage - for example, moving operations to different times of day to avoid Transmission Network Use of System (TNUoS) and Triad charges.
Self generation and sustainable solutions	We can provide green and self-generation energy solutions you can install on-site. These solutions could help you lower your costs and increase your business's energy security. Solutions include: <ul style="list-style-type: none"> • Solar panels • Combined Heat and Power (CHP) • Battery storage solutions • LED lighting
Electric Vehicle (EV) charge points	As electric vehicles become increasingly popular, so does the importance of having charge points on your site. We can install solar-topped EV solutions that allow visitors to your site the opportunity to charge their car batteries, which they'll be very happy about!
Funding solutions (PPA, Asset Funding, CAPEX)	Want to go green but find the capital cost prohibitive? We have a range of financial and funding solutions that make your ambitions achievable, including: <ul style="list-style-type: none"> • Power Purchase Agreements (PPA) • Asset Funding • Capital Expenditure (CAPEX) funding
Real-time energy insights and management	See what you're using as it happens, with reports for every site and each utility. Develop precise and powerful insights into your usage that allow you to make the best decisions for your business.
Refined energy wastage detection	If your costs seem unusually high compared to your usage, Advantage can undertake work across all your utilities that reveal usage that may otherwise remain hidden on general audits.
Energy saving quantification	We can provide specialist tools to measure the effectiveness of your energy saving initiatives and projects.
